DRP 06 TR MINI-BOOM

FULLY POWERED CONCRETE PLACEMENT BOOM

www.pamec.com

DRP 06 TR Mini-boom

The DRP 06 TR is ideal for concrete distribution over large areas, even indoors, where traditional booms have difficulty gaining access.

Mounted on a track carriage, this new type of equipment, fully powered, is operated by remote control.

The operator is able to choose the best position to maneuver the equipment in absolute safety for himself as well as for other workers in the construction area. In fact, since it is radio controlled, it is possible to move the tracks and the two boom sections autonomously.

ADVANTAGES

The track system allows the operator to move the equipment without a lifting device or crane during the placing operations.

The operator has a free range of movement and is able to choose the position offering the best visibility and greatest safety for himself and others.

The rubber hoses do not require manual handling. Mounted on the slides provided, they are dragged by the device itself.

Faster placement thanks to its 5" diameter pipeline.

Necessitates fewer workers in the operational area.

Better ergonomics for users.

CONCRETE PUMPING & PLACING SYSTEMS

DRP 06 TR

Type	Code No.	Piping		R		Weight			
		D.N.				Boom only		Concrete	
		mm	in.	M	ft	Kg	Lbs	Kg	Lbs
DRP 06 TR - 45M	73 0 56 50 1 45 9	100/127	4,1/2"	6	19,7	2.990	6.591	195	430
DRP 06 TR - 55M	73 0 56 50 1 55 9	125/148	5,1/2"	6	19,7	3.040	6.702	300	661

The boom is equipped with a 22 hp gasoline engine. Always use 87 octane gasoline minimum.
The boom is radio remote control operated.
By request, we can also supply an additional wired control to be used in case of emergency.

Other versions on request.
